

Claude Code Quick Reference

Slash Commands, Keyboard Shortcuts & Enterprise Commands

Essential Slash Commands

Command	What It Does
/context	Show token usage breakdown by category
/cost	Show session cost (API/Enterprise only)
/compact	Summarize conversation to free context space
/clear	Full context reset — use when switching tasks
/effort low medium high	Set reasoning depth (low=cheap, high=deep)
/model	Switch models mid-session (Opus/Sonnet/Haiku)
/sandbox	Enable OS-level filesystem and network isolation
/skills	List available skills
/hooks	View configured hooks
/mcp	Check MCP server connection status
/rc	Start Remote Control (QR code for phone/tablet)
/exit	End the current session
/resume	Resume a previous session
/init	Auto-generate initial CLAUDE.md for the project

Keyboard Shortcuts

Shortcut	Action
Shift+Tab	Cycle modes: normal > accept-edits > plan > normal
Ctrl+O	Toggle verbose mode (see hook output)
Alt+P (Option+P Mac)	Open model picker
Ctrl+C	Cancel current operation
Esc	Clear current input

CLI Flags (for CI/CD and automation)

Flag	Usage
------	-------

<code>claude -p "prompt"</code>	Headless mode — non-interactive, for CI pipelines
<code>--output-format json</code>	Structured JSON output with metadata
<code>--model claude-sonnet-4-6</code>	Specify model for the session
<code>-w feature-name</code>	Start session in isolated git worktree
<code>--tmux</code>	Open Claude in a tmux split pane
<code>--continue</code>	Continue the most recent conversation
<code>--resume SESSION_ID</code>	Resume a specific session by ID

Model Selection Guide

Model	Best For	Cost
Opus 4.6	Complex architecture, deep reasoning, refactoring	Highest
Sonnet 4.6	Daily development, code review, most tasks	Medium (recommended default)
Haiku 4.5	CI/CD automation, simple queries, lightweight tasks	Lowest

Effort Level Decision Tree

Low effort: Renaming, formatting, simple lookups, git status checks

Medium effort (default): Feature implementation, code review, test writing, daily development

High effort (Ultrathink): Architecture decisions, complex refactoring, multi-file redesign, debugging subtle issues

Enterprise strategy: Default to Sonnet + medium effort. Escalate to Opus + high effort only when the task genuinely requires deep reasoning.
