

Team Onboarding Checklist

Claude Code Enterprise Deployment

Pre-Deployment (Admin)

- Choose deployment model: Subscription (Team/Enterprise) or API or Cloud (Bedrock/Vertex)
- Set up Team/Enterprise plan in Anthropic admin console
- Configure SSO with your identity provider (Okta, Azure AD, SAML 2.0)
- Enable SCIM for automated user provisioning
- Set organization-wide spending limits and per-user caps
- Create managed-settings.json with enterprise deny rules
- Define MCP server allowlist (approved external integrations only)
- Add ANTHROPIC_API_KEY to GitHub repository secrets (for CI/CD)

Per-Project Setup

- Create .claude/settings.json with project-specific deny and allow rules
- Build CLAUDE.md with project architecture, coding standards, testing requirements, PR format
- Create nested CLAUDE.md files for monorepo packages (api, web, shared)
- Create .claude/skills/ directory with team skills (code-review, deploy)
- Configure PostToolUse hooks (test-on-save)
- Add .claude/worktrees/ to .gitignore
- Commit .claude/settings.json and CLAUDE.md to version control
- Set up GitHub Actions with claude-code-action for automated PR review

Per-Developer Setup

- Install Claude Code CLI: follow team installation guide
- Install VS Code extension (or JetBrains plugin)
- Authenticate with team SSO credentials
- Clone project repository and verify CLAUDE.md loads
- Run /skills to verify team skills are available
- Run /sandbox to enable OS-level isolation
- Test deny rules: attempt to read .env file (should be blocked)
- Run first task: ask Claude to explain the project architecture
- Review CLAUDE.md and suggest improvements via PR

Verification

- Developer can start Claude session without auth errors
- Deny rules block access to .env, secrets, SSH keys
- Sandbox mode enabled (/sandbox shows confirmation)

- Skills appear in /skills list
- Hooks fire on file edits (check with Ctrl+O verbose mode)
- GitHub Actions security review runs on test PR
- Developer understands /context, /compact, /clear for cost management
